MUNITIONS FACILITIES IN DAIREN, MANCHURIA

25X1D

This memorandum and report has been prepared in answer to a request by RR/D/I on [REDACTED] to study known munition facilities and attempt to correlate reports of new munition facilities in the Dairen, Manchuria area from existing aerial photography. Munition facilities are those engaged in the manufacture of component parts, the assembly or storage of all types of munitions.

Areas # 3 and 4, of the listed installations, have definitely been identified as munitions facilities. Areas # 1, 2, 5 and 6 are installations where such facilities could exist or do exist. There has been no definite identification that they are being used for this purpose but due to ground reports listing such installations as probably being located in this area, an attempt was made to pinpoint these sites. A description of each of these areas is given in this report.

The photography used in this study is listed with each illustration.

25X1D

This area is indicated as a possible munitions storage area. Munitions storage has been reported in this general vicinity but photography of sufficient scale or clarity to determine its definite use is not available. There were many additional barracks type buildings here in World War II which since have been removed. At the present time there are twenty buildings and the roads leading to each of them would indicate the buildings are probably used for some type of storage, rather than barracks. There is a cleared strip around the entire area and it is enclosed by a high fence.

Annotation # 2

This is a large petroleum refinery with petroleum ^{Storage} facilities.

This reported explosive manufacturing plant has been greatly expanded since World War II and still appears to be in the process of expansion.

Annotation [REDACTED]

ILLEGIB

This area is enclosed by a high fence with a patrol path lying inside the fenced area. It is connected by road to the main highway and rail line running between Dairen and the Ta-lien Chemical Works.

25X1D

AREA 4

This area has been developed since World War II. It lies close by the Dairon Air Field and possibly could be used as the ammunition storage area for the base. Its size however would indicate a much larger function.

Annotation # 1: This area contains 15-25 buildings well dispersed and inter-connected by a road net. The scale of the photography makes it impossible to determine if these buildings are revetted. At the upper end of the area construction of more buildings was still in progress at the time of this photography.

Annotation # 2: In this area there are 20-25 buildings of various sizes revetted into the hill sides.

25X1B

25X1B

Annotation # 3: There are 15-20 buildings of various sizes and types serving various functions in this area. They are probably used as laboratories, housing, and administration buildings.

The compound is enclosed by a fence around the entire area. It is serviced by a short spur rail line and roads connecting with Dairon and the Air Field.

Photograph: [REDACTED]

Area 7 and 8

Annotation # 2 (Area 8) This is the To-lier Steel Plant
probably engaged in the manufacturing of various munitions
components.

Annotation # 3: To-lier Steel Plant.

PHOTO INTELLIGENCE MEMORANDUM

YUGOSLAVIAN/ROMANIAN BORDER STUDY

25X1A This memorandum reports the completion of Project 72.155, requested by [REDACTED] ORR/D/GG. All available aerial photography covering the Yugoslavian/Romanian border was procured through the services of OCR/GR.

25X1A The photography was plotted on maps furnished by the requester. Initially, this Division had planned to interpret the photography and evaluate the maps, but higher priority projects demanded out time. [REDACTED] offered to do his own interpretation and evaluation, and was satisfied with the plots and photography which were furnished to him.
